We sell liner up to 50' x 100' if you don't see the size Liner you need you can contact us and we will cut custom sizes for your specific needs.

We only Install, Sell and recommend Fish Safe EPDM 45 Mil Liner. Flexible 45 MIL Liner provides you the flexibility to create irregular shaped ponds. EPDM Liner is made to last and comes with a 20 Year manufacturer warranty against breakdown from the Sun's UV Light (Lesser Grade products such as PVC will dry and crack in as early as 2 years).

What Size do I Need?

Note: 5' Widths are mostly for Stream Liners. Simply measure your stream length and add ~5 feet for biofalls hookup and overlap into the pond.

Liner comes in square/rectangular lengths. You should measure your widest portion of your pond and then measure the deepest section of your pond. Once you have these 2 measurements use the calculation below to get your overall liner size.

NOTE: When in doubt always round up, you don't want to be caught short when it comes to your pond liner.

Calculation for Pond liner

Liner Width = Pond Width + (Pond Depth*2) + 2 (1 foot overhang on each side)

Liner Length = Pond Length + (Pond Depth*2) + 2 (1 foot overhang on each side)

Example

Your Pond is 9 feet Wide and 14 Feet Long and 2 feet deep. You would need a 15 x 20 Liner.

Liner Width = $9 + (2*2) + 2 = 15$

Liner Length = $14 + (2*2) + 2 = 20$
